

Tutorial 6

Q1. For an 8086 system, the following parameters are given

Address set up time = 50ns

Data set up time = 120ns

Clock period = 200ns

The memory device provides valid data 900ns after the address becomes valid

Determine the number of wait states required.

Q.2 Interface memory chips with 8088

4K ROM -starting at 00000_H (4 k chips available)

4K RAM-starting at 0A000_H (2k ram chips available)

4K ROM-starting at 10000_H (2k ram chips available)

4K ROM - starting from FF000 (4K chips available)

1- 74LS138 is available

Use Incremental addressing
